Stainless Steel Faucet

Pricelist w.e.f. 01-12-2014

Lead Free

BRASS FAUCET

- Brass faucet surface need the electroplating process to get temporary brightness. The electroplated layer would fall off as time goes by.
- The inner-wall of brass faucet is uneven, the dirt and other harmful element can stain on the wall easily.
- The lead in brass will dilute into the water which makes water polluted.

JAYNA STAINLESS STEEL FAUCET

- Stainless steel 304 faucet, with soft silk finish technology, surface is beautiful and durable.
- Stainless steel faucet is casted and this ensures the smoothness and cleanliness of inner-wall surface.
- Manufactured by high-grade SS304 material, SS304 faucet is lead-free and rustless.
